Joy & Beauty of Computing (JBC)

This first course we offer training in provides an overview of the world of computing, as well as a gentle introduction to computational thinking using the Python programming language. It examines the computing field and how it impacts the human condition, and introduces exciting ideas and influential people.

Mobile CSP

Mobile CSP is based on the College Board’s emerging Advanced Placement (AP) Computer Science Principles curriculum framework for introductory computer science. Students will learn computer science by building socially useful mobile apps. In addition to programming and computer science principles, the course is project-based and emphasizes writing, communication, collaboration, and creativity. Details about the course curriculum can be found at mobilecsp.org

Professional Development

We offer professional development opportunities for Montana high school teachers in both the JBC and Mobile CSP curriculums. Teachers who are interested in offering either course in their school are encouraged to attend.

When: June 24-28, 2019
Where: University of Montana, Missoula

Generous stipends and travel support available!
