A new interdisciplinary program that offers curriculum focusing primarily on brain sciences and research

B.S. degree in **Neuroscience** at the University of Montana

Two degree options:

**Cognitive Neuroscience**  
(contact Dr. Allen Szalda-Petree, allen.szalda-petree@umontana.edu)

**Cellular and Molecular Neuroscience**  
(contact Dr. Jesse Hay, jesse.hay@umontana.edu)

The discipline of Neuroscience explores how the brain and nervous system function to generate behavior, emotion and cognition. As the function and development of the brain is highly complex and multi-faceted, exploring the complexity of the nervous system requires a highly interdisciplinary approach integrating biology, psychology, chemistry, physics and the humanities.
