INSTRUCTOR: Diane Friend  
E-MAIL: diane.friend@umontana.edu  
PHONE: 243-4299  
OFFICE: CHCB 129 (inside the Physics/Astronomy dept. office)  
OFFICE HOURS: M 10-11 & 1-2, W 10-11 & 3-4, Th 11-noon  
Please feel free to stop by or make an appointment for other times.

Required supplies: You will need a calculator capable of doing scientific notation and a small flashlight or headlamp for the nighttime observing.

Moodle: You have TWO Moodle listings for Astronomy 135.

Astronomy 135 Common Area
Important course announcements, all lab exercises, and very useful links and resources will be posted on Moodle in the Astronomy 135 Common Area. You will need to check the Common Area every week before lab to make sure you are up to date on the activities and resources for that week.

Section specific Moodle shell
Quizzes and all of your lab grades will be posted in the Moodle shell for your specific lab section.

Labs: All labs will be available for download in the Moodle Astronomy 135 Common Area. You do not need to purchase a lab manual for this course.

IMPORTANT: You MUST bring a hardcopy of each week's lab to class with you. There will be a standard 10% reduction in your weekly lab grade if you come to class without the write-up.

Astronomical Observing
Observing the universe personally is an experience not to be missed! Even on campus, a clear, dark Montana night will yield spectacular views of star clusters, nebulas, and galaxies. I would like everyone in the class to have a chance to observe.

We will start the semester with a visit to our new Planetarium to do some stargazing and get you familiar with what is currently up in the night sky. Although Spring semester weather in Missoula is notoriously cloudy, we will try to have one formal observing lab later in the Spring, and hopefully, some informal observing opportunities where you can bring your friends and/or family members to our Skaggs rooftop observatory.
Course Content

This course will give you an introduction to some of the METHODS astronomers use to study the universe. You will have a chance to see deep-sky objects through a telescope, use modern computer software to explore deep-sky objects, analyze astronomical data, and discover HOW astronomers gather information about the stars, the galaxy in which we live, and the universe at large.

By the time you finish this course you should

• know how to find your way around the night sky
• know where and how to look up information on any object in the sky you are curious about
• have gained a fundamental knowledge of the properties of light and the information that can be gleaned from it
• understand the role of gravity in the motion of celestial objects and the evolution of structure in the universe
• understand the basic nature of stars (including our Sun) and how they evolve over time
• know the basic characteristics of our home galaxy, the Milky Way
• understand how galaxies can differ from one another, how they evolve over time, and what they can tell us about the evolution of the universe
• have gained experience with some of the techniques that have enabled us to discover some amazing things about the universe we live in!

Specific, detailed learning objectives for each laboratory exercise are given at the beginning of each lab write-up.

Course Expectations

The labs will often expand on material presented in Astronomy 132, so it is important that you attend the lectures and keep up with any readings or activities in that class before coming to lab. Most past students of the lab have found that the more in-depth, practical experience of the laboratory course greatly helps their understanding of some of the material presented in the lecture.

Throughout the course you will be expected to:

1. Read through the experiments (at least the introductory material in them) and complete any pre-lab reading required before coming to class. Make sure you understand the material from the lecture that relates to the lab.
2. Ask questions. Come prepared to enter into discussion. Try to ask questions that help you focus on the big picture, not just procedural details.
3. Do your own work. In short, always practice academic honesty. Academic misconduct is subject to an academic penalty by the course instructor and/or a disciplinary sanction by the University. If you have not read through the material at http://www.umt.edu/vpsa/policies/student_conduct.php, do so now!

IMPORTANT: Specifically, in this course, academic honesty means that each student contributes equally to the completion and write-up of each lab. EVERY student working in a group is expected to be a thinking, questioning, contributing member! Lab quizzes are to be worked on alone.

I reserve the right to assign zero credit to students I suspect of relying on the work of others. The zero score may be replaced with a full credit grade by scheduling an oral interview that will cover the concepts of that particular lab. If you can convince me that you understand the material, I will grade you on the work your group turned in.

Grading

This course consists of 13 graded labs. Your grade for each lab (with the exception of the planetarium and observing labs) will consist of two parts. 60% of your grade will be based on the satisfactory completion of your weekly lab in class. I will look through these at the end of your lab period, checking to see if they are complete and spot-checking some of the more difficult questions. We can go over any problems you had questions on. You should also feel free to come see me outside of class if you have additional questions you would like to clear up before taking the quiz. The remaining 40% of your grade will be based on a weekly Moodle quiz that will test your understanding of the material presented in the lab. Each quiz will be open from the end of that lab period until the
start of your lab period the following week. Answers to quiz questions will be available once the quiz has closed for all lab sections. The observing lab will have no quiz, so 100% of that week’s grade will be based on your lab write-up. Each person must turn in a personal lab write-up for the Observing Lab. Your grade for the week we visit the Planetarium will be based solely on attendance.

**Grading summary**

In class lab write-up: 60% of weekly grade
1) Each person must submit a lab write-up at the end of each period to be checked off for completion
2) One lab write-up from each group will be graded at the end of each lab period
   i) ALL group members must be present during grading to receive credit
   ii) All group members will receive the same grade for that lab
   iii) Group size can be from 1-4 students

Lab quiz: 40% of weekly grade
1) To be completed on your own.
2) Can be completed anytime during the week following your lab.

**Exceptions:**

Observing Lab
- Each person must hand in a write-up for grading (I will grade these outside of the lab period.)
- 100% of the grade for this lab will be based on your individual write-up.

Planetarium
- Grade based on attendance only.

Each lab activity will be weighted equally. I will drop your lowest lab and quiz score at the end of the semester. Plan on grades being assigned based on the traditional grading curve: 90-100% A, 80-89% B, 70-79% C, etc..

**Note on missed labs:**
Because you can drop your lowest lab and quiz score, there will be NO make-up labs. You can miss any one lab for any reason. If you complete all labs and quizzes, you get to drop your lowest lab and quiz grades. If you know ahead of time that you will have to miss a lab for a legitimate reason, please get in touch. I may be able to fit you into another lab section that week. If you have a prolonged illness or emergency with appropriate documentation, definitely come see me and I will do my best to help you out.

**EQUAL ACCESS:** A fair and inclusive learning environment benefits us all. I encourage students from different cultural backgrounds, students for whom English is not their native language, and/or any student who has a disability that may adversely affect their academic performance to contact me within the first few days of class to discuss appropriate accommodations. If you think you may have a disability and have not registered with DSS, please contact them in Lommasson 154, call (406) 243-2243, or view the DSS website at www.umt.edu/dss. The folks at DSS are very helpful!

**ADD/DROPS:** The last day to add/drop on Cyber Bear is Friday, Feb. 13. The last day to drop with your instructor’s and advisor's signature, is Monday, April 6. A drop, or change of grading option after Monday, Nov. 2 requires the signature of the Dean and written documentation of exceptional circumstances. Doing poorly in the class does not constitute adequate reason to drop the class at the end of the semester!

**Observing Notes**
I will post announcements of any especially interesting or unusual night sky events on Moodle.

**Moon phases this semester**
New moon: Feb. 18, Mar. 20, April 18, May 17
Full moon: Feb. 3, Mar. 5, April 4, May 3

**Meteor showers**
Lyrids: night of April 21/22
Eta Aquarids: night of May 5 (but there is a Full Moon that night
Perseids: night of August 12
### SPRING LAB SCHEDULE
